Call for Letters of Intent for Community Alert Brokers

Eric Bellm, Robert Blum, Melissa Graham, Leanne Guy, Željko Ivezić, William O'Mullane, and John Swinbank *for the LSST Project*

LDM-682

Latest Revision: 2019-02-20

## Abstract

A major product of the nightly processing of LSST images is a world-public stream of alerts from transient, variable, and moving sources. Science users may access these alerts through third-party community brokers, which will receive the LSST alerts, add scientific value, and redistribute them to the scientific community.

This document is a call for Letters of Intent (LOIs) to propose a community broker, as described in "Plans and Policies for LSST Alert Distribution" [LDM-612].

Call for Letters of Intent for Community Alert Brokers

1   Process

The broker selection process will have two stages: an initial open call for LOIs from all interested parties (described in this document), and a subsequent full proposal call solicited from invited LOI writers. This two-stage process ensures those writing full proposals have a reasonable chance at selection and provides an opportunity for early feedback. An invitation to submit a full proposal may also be valuable to proposers in obtaining relevant funding. No financial support is available from the LSST Project.

2   LOI Guidelines

2.1   Who Can Submit

Individuals at any institution (academic or non-academic) worldwide may submit an LOI. Submission is open to all, regardless of whether or not an individual holds LSST data rights.

2.2   Page Limits

LOIs should be no more than four pages, with standard margins and font sizes. A LaTeX template is available at `https://github.com/lsst/LDM-682/blob/master/LOI_submission_template.tex`.
2.3   Due Date

For full consideration, LOIs should be submitted by May 15, 2019. Submission of an LOI is required in order to be invited to submit a full proposal.

2.4   Content

Proposers are encouraged to read LDM-612: Plans and Policies for LSST Alert Distribution, in preparing their proposal. The LOI should address briefly the following items:

- Scientific goals of the proposed broker system

- Anticipated data products & services

- Envisioned technical implementation

- Management Plan

- Description of proposing team

- Relevant experience

The LaTeX template provides a handful of prompts for each section.

2.5   Submission Instructions

Please submit LOIs as PDF documents to `lsst-community-brokers@lists.lsst.org`.

3   Broker Workshop

LOI submitters are invited to attend a workshop in Seattle the week of June 17, 2019. This technical workshop will bring together LSST Project personnel, representatives of the LSST Science Collaborations, and proposers of community brokers. Topics of discussion will include LSST-broker interfaces, architecture and technology choices, the broker selection process, policy issues, science use cases and expectations, and development progress from precursor surveys. More information will be forthcoming soon.

4   Selection Process and Timeline

It is understood that proposed brokers may be in formative stages at the time of this call. Please refer to LDM-612 §4.5–4.6 for evaluation criteria and procedures.

We anticipate notifying invited LOI writers in August 2019. As described in LDM-612 we expect to issue the call for full proposals to invited teams in Q4 2019, with an anticipated due date in Q2 2020.
